

Week 12 Milestone Worksheet

SECTION A: Introducing Yourself

Part 1: Elevating Your Website Bio

You will now **take your website “Bio” to the next level** by expanding on your existing “Bio”. In order to accomplish this, you need to bring together the following elements from your Week 9–12 Milestones:

a. Week 9

Name the GCGO that most strongly resonates with you.

Job Creation

WHY does this GCGO resonate so strongly with you?

Job creation resonates with me because unemployment continues to affect many young people in South Africa. I have seen how limited opportunities can affect individuals, families, and communities. I believe technology can help create access to skills, information, and opportunities that improve people’s lives.

b. Week 10

What is your choice of specialization to study?

Data Engineering

WHY do you choose this specialization? How does it help you achieve your mission statement or GCGO goals?

I chose data engineering because I enjoy solving practical problems and working with systems. Data engineering gives me the skills to organize, move, and transform data so that businesses can make better decisions. In the long term, I believe these skills can contribute to solving unemployment and supporting job creation through smarter, technology-driven solutions.

What is your ideal job title/position?

Junior Data Engineer

What are the **top 3 insights** you were able to find from experts in your chosen field on how you can be successful?

1. Master the fundamentals first, especially SQL, databases, and data modeling.
2. Build practical projects that solve real business problems.
3. Keep learning continuously because data tools and technologies evolve quickly.

c. Week 11

Add your professional photo to your website portfolio, and share the link to that page in the space below.

<https://sites.google.com/view/lidzhade-rudzani?usp=sharing>

Provide an interesting and/or funny fact about you.

I enjoy fixing things whether it is a technical issue, something electrical, or figuring out why a system is not working.

Provide the link to your up-to-date LinkedIn profile page.

www.linkedin.com/in/rudzani-lidzhade-27007ab6

d. The new Bio

Now combine your existing website “Bio” piece from your website with all the different elements you have listed above (not necessarily in the same order) to create an improved “Bio” that introduces visitors to:

- Who you are
- What makes you unique
- Your passions
- How your job will enable/is enabling you to live out your passion

Your new “Bio” piece.

Rudzani is a technical support professional and aspiring data engineer with a growing foundation in troubleshooting, technology, and data systems. He is currently building his skills in SQL, data analysis, and data engineering through ALX.

He is especially passionate about the Global Challenge and Global Opportunity of job creation. Having seen how unemployment affects individuals and communities in South Africa, he is motivated by the belief that technology can help create access to opportunity, skills, and economic growth.

Rudzani enjoys solving practical problems and understanding how systems work. This is what drew him toward data engineering. His goal is to become a Junior Data Engineer and use data to improve business processes, support smarter decision-making, and contribute to solutions that create meaningful impact.

One thing that makes him unique is that he enjoys fixing things — whether it is technical systems, electrical problems, or finding practical ways to improve how things work. He believes that combining technical skills with curiosity and persistence will help him build a career that creates both professional value and real-world change.

SECTION B: Incorporating Your Brand

Part 1: Translating Your Brand

In **Week 11** you learned about **personal branding**, and how to apply that branding to your portfolio. In this final milestone, you will **apply everything you learned about personal branding to your website**.

In the space below, list **at least 4 steps** you'll take to ensure your branding is consistent across all the pages of your website (including your portfolio).

1. I will use a consistent color scheme across all pages of my website, including matching background colors, buttons, headings, and section highlights to maintain a clean, professional identity.
2. I will use the same font styles, text sizes, and layout structure throughout the website so that all pages feel connected and visually organized.
3. I will ensure that my professional identity is consistent by using the same profile photo, professional title, and short introduction across my homepage, bio, portfolio, and contact sections.
4. I will maintain a consistent message about my career goals, focusing on technology, problem-solving, technical support, and data engineering throughout the website content.
5. I will organize projects and portfolio content in a structured format so visitors can clearly understand my skills, learning journey, and technical interests

Remember that **consistency is key** for this! Your website must be consistent across all its pages, but especially between your portfolio and your bio.

Part 2a: Updating Your Website

In the space below, list **at least 3 changes** that you made to your website to make sure the steps you identified in Part 1 are consistently applied.

1. I updated the homepage layout by adding a cleaner hero section with a professional introduction and consistent colours throughout the page.
2. I changed the "Bio" section into a more structured "About Me" section to explain my background and goals better, and transition into data engineering.
3. I updated the website's styling by using consistent fonts, spacing, and section formatting across pages to improve consistency and professionalism.
4. I added clearer navigation sections such as skills, projects, and contact information to improve the user experience and make the website easier to explore.
5. I improved the overall visual design by adding a modern blue-themed background and cleaner section organization aligned with my personal brand.

Part 2b: Sharing Your New Website

Please **share the URL of your updated website** below. IMPORTANT: Please make sure the URL works and is visible to anyone with the link. **Make sure the changes you made are clearly visible, and that your website meets all requirements** in the *Individual Activity: Improving Your Website* on Savanna.

<https://sites.google.com/view/lidzhade-rudzani?usp=sharing>

SECTION C: Your Elevator Pitch

Part 1: Adding Your Elevator Pitch Video to Your Website

The time has finally come to **do something about that placeholder** on your website. You are (finally) **recording and sharing your elevator pitch** video! Once complete, add the elevator pitch video to the website. Please share the URL of your uploaded elevator pitch below.

IMPORTANT: Please make sure the URL works and is visible to anyone with the link. **Make sure that the elevator pitch meets all the requirements** of the [*Elevator Pitch Individual Activities*](#) on Savanna.

SECTION D: Presenting Your Website

Part 1: Feedback from Your Peers

Share your website with your peers! **Take notes** on what they like about your website, and what they think can be better.

In the space below, list the top 4 things your peers like about your website.

1. My peers liked the clean and professional design of the website, especially the modern blue color theme and simple layout.
2. They liked that the website clearly explains my career direction, technical background, and interest in data engineering.
3. My peers mentioned that the navigation was easy to follow and that the sections were organized in a clear way.
4. They liked the portfolio direction and the fact that the website shows both my technical support experience and my learning journey into data engineering.

In the space below, list your peers' top 4 suggestions to make your website better.

1. Add more technical projects and practical examples to strengthen the portfolio section.
2. Include more visuals such as icons, charts, screenshots, or project previews to make the website more interactive and engaging.
3. Improve the About Me section by making it slightly more personal and adding more details about my goals and interests.
4. Add links to LinkedIn, GitHub, and certifications so visitors can easily view my professional profiles and achievements.

Part 2: Changes

Please **list at least 3 updates/changes you made** to your website after receiving feedback from your peers (*these cannot include any of the changes you made in Sections A and B or your Elevator Pitch*).

1. I added clearer section headings and improved the overall structure of the homepage to make the website easier to navigate.
2. I updated the portfolio section by planning additional project placeholders for SQL, data engineering, and dashboard-related work.
3. I improved the visual consistency of the website by adjusting colors, spacing, and formatting across multiple pages.
4. I added more professional information about my technical support experience, learning journey, and future goals in data engineering.
5. I included links to my LinkedIn profile and improved the contact section to make networking easier.

Please go back to Savanna and continue with your learning content. You will be prompted when you need to return to complete Section E of your Milestone Worksheet.

SECTION E: Your Skills

Part 1: Your Skills Map

Please share the URL of your updated skills map here. Make sure the URL works and is visible to anyone with the link. Also, **make sure that the skills map meets all the requirements** of the *Individual Activity: Update Your Skills Map* on Savanna.

 Rudzani Lidzhade- Skills Tracker

Part 2: Reflection

Review the **first milestone and the goals** that you set out to achieve through this course. You wrote them down in your survey assignment.

Reflect on the following questions and create a writeup in the space provided below.

- *How many of the initial skills have you developed or learned about?*
- *How many new skills did you learn about in this course?*
- *How confident are you in your skills and knowledge now as compared to the start of the course?*
- *How do you intend to keep developing your skills and knowledge?*
- *How has the skills map helped you track your progress, and what can you do to keep doing so in the future?*

Your reflections

At the beginning of this course, I wanted to improve my technical skills, communication, problem-solving abilities, and gain a better understanding of technology career paths. Since starting the programme, I have developed a stronger understanding of areas such as SQL, data engineering, data analytics, teamwork, user research, wireframing, presentations, and professional communication. I also became more aware of how technology can be used to solve real-world problems such as unemployment and skills development.

This course introduced me to many new skills that I had little or no exposure to before. I learned about data engineering concepts, databases, user personas, KPIs, prototyping, elevator pitches, teamwork structures, and industry research. I also gained more confidence using tools such as Google Sites, spreadsheets, and presentation platforms.

Compared to the start of the course, I feel far more confident in both my technical and professional abilities. I now have a clearer understanding of the direction I want to take in my career, especially in data engineering and technology-driven problem solving. I also feel more confident speaking about my skills, presenting ideas, and collaborating with others in a professional environment.

I intend to continue developing my skills by completing more SQL and data engineering courses, building personal projects, improving my portfolio website, and practicing with real-world datasets. I also plan to continue learning from industry professionals, YouTube tutorials, online communities, and hands-on practice

The skills map helped me track my growth by showing me which areas I was improving in and where I still needed development. It gave me structure and helped me reflect on my progress regularly instead of learning without direction. In the future, I can continue tracking my growth by setting learning goals, documenting projects, updating my portfolio, and reviewing my progress consistently as I gain more experience in the tech industry.

Once you have completed this worksheet:

1. Export/convert to .pdf.
 2. Rename it per the instructions.
 3. Upload to Savanna as your Milestone 12 Submission.
 - 4. Celebrate a job well done!**
-
